

Fig 5.3 Memory (MB) vs. Time (min)

Once rejuvenation was implemented on Adhoc conferencing and Media distribution system it is observed that Corruptions were noticed initially but once rejuvenation was implemented the corruption and delay in the video displayed reduced. Memory usage was limited throughout the application running period. Memory leakage was controlled Frequency of Application failure or system hang was reduced. Observation reveals that for a larger multimedia system when rejuvenation is implemented it acts like a self-healing module.
