5. Future Scope

When we consider an image which has a phase variation i.e. an image which having variation in all the three dimensions the above logic may not work. But the logic can be developed for processing an image in three dimensions. For processing an image in all the three dimensions, a program which processes the length, height and depth of an image is designed. The logic for image retrieving is complete when the images with phase variations are also retrieved. However the logic for such retrieving is still under research.

Authors Profile

S.Vandana did her Bachelors degree in Electronics and Instrumentation Engineering from Sir C.R.Reddy Engineering College, Eluru and obtained her Masters degree in Embedded Systems from Sri Vasavi Engineering College, Tadepalligudem. She has 4 years of teaching experience and presently working as an Assistant Professor in Electronics and Instumentation Department in Sridevi Women's Engineering College at Hyderabad. Her areas of research include Image processing and Neural Networks.

K.TulasiRam did his Bachelors degree in Electronics and Instrumentation Engineering from Karunya Institute of technology and sciences, Coimbatore and obtained his Masters degree in Digital Systems and Computer Electronics from RGMCET, Nandhyal. He was pursuing his PhD in the field of VLSI from JNTUH. He has 10 years of teaching experience and presently working as an Associate Professor and HOD in Electronics and Instumentation Department in Sridevi Women's Engineering College at Hyderabad. His areas of research include VLSI, Fault Tolerance and Digital Electronics.
